

Software Requirements for RecipeApps

RecipeApps

Created by: Anne Zimmerman

Overview

This document describes requirements for the software implementation of RecipeApps. A full description of the app plus the requirements of this implementation are provided below.

The App

This software will allow the user to search for recipes by recipe name. A list of recipes will appear that either completely or partially match the input of the user's search. The user can then double click on a recipe of their choice to open a new form with more detailed info about that particular recipe.

Software Implementation

UI Elements

The software will present the Recipe app with the UI elements listed below.

- Read-Only for all elements except the search bar
- Search Form
 - Search bar in which the user can enter some or all of a recipe name
 - A Search button
 - Data Table in which the result set from the search will appear
- Recipe Form
 - List of labels populated with the appropriate data for the chosen recipe
